

🤖 Simple Chatbot

A rule-based Python chatbot that responds intelligently to common phrases using regular expressions.

Features

- Greets users and responds to common conversational inputs
- Tells the current time and date dynamically
- Remembers your name within the session
- Tells programming jokes 😊
- Responds empathetically to emotional inputs
- Multiple randomized replies so it never feels repetitive
- Graceful exit on "bye", "quit", or Ctrl+C

How to Run

```
```bash
python chatbot.py
```
```

Sample Conversation

```
=====
🤖 CHATBOT 🤖
=====

I'm ChatBot! Type 'help' to see what I can do.
Type 'bye' to exit.

You: hello
Bot: Hi there! 🖐️

You: my name is Chellam
Bot: Nice to meet you, Chellam! 😊

You: tell me a joke
Bot: Why do programmers prefer dark mode? Because light attracts bugs! 🐛😂

You: what time is it
Bot: The current time is 10:30 AM 🕒

You: bye
Bot: Goodbye! 🖐️ Have a great day!
```
```

### ## Supported Inputs

Input	Response
hello / hi / hey	Greeting
how are you	Status reply

my name is [name]	Personalized reply
what's your name	Bot introduces itself
what time is it	Current time
today's date	Current date
